Careers that combine specialized skills in health care and data are on the rise. It is estimated that by 2030 healthcare-related jobs could grow by 80 million to 130 million (McKinsey Global Institute, December 2017), and equipping these health workers with the latest technology and data skills is critical.

To help meet this need, UC Davis Continuing and Professional Education has partnered with the online learning education platform, Coursera, to launch a new program, *Health Information Literacy for Data Analytics*. This three-month, online program is intended to teach professionals who work in data and technology, but have no experience in health care, learn how to work with healthcare data and apply their existing skills to the healthcare industry.

Instructors for the specialization are Brian Paciotti, a healthcare data scientist, and Doug Berman, director of data acquisition and architecture, both with the Research IT Department at UC Davis Health System.

"Experience in health care is a critical qualification for people I hire," said Berman. "This specialization allows people with experience in general IT systems to change or advance their careers in healthcare IT. They are able to demonstrate an understanding of the nuances of working in healthcare information systems and appreciate the unique challenges and opportunities healthcare data systems present."

The *Health Information Literacy for Data Analytics* Specialization on Coursera complements the existing Healthcare Analytics Certificate Program offered by UC Davis Continuing and Professional Education.

While the certificate program is designed for those with health care and clinical experience to learn the skills of data analytics, the Coursera program is designed for tech and data professionals to learn the terminology and types of data found in health care.

The Coursera specialization covers the various types and sources of healthcare data, how to understand and interpret the values of these data, how to assess the quality of data, and how to compare and contrast the common data models used in healthcare systems.

"The courses in the specialization fill an essential need for data and technology professionals interested in a career in health care," said Misty Avila, Health Sciences program manager at UC Davis Continuing and Professional Education. "With the knowledge and experience of the UC Davis healthcare data scientists, we are able to help bridge this gap and prepare professionals for a career in healthcare data."

As the demand for robust healthcare data analytics grows, so do the career opportunities. If you’re a technology or data science specialist looking for a career change into health care, this three-month, online program might be right for you.

**Courses in this specialization:**
- Healthcare Data Literacy
- Healthcare Data Models
- Healthcare Data Quality and Governance
- Analytical Solutions to Common Healthcare Problems

Juggling a variety of tasks at the same time was never an issue for Jessica Johnson, a facilities and housing specialist for a community services organization in Northern California. From writing grant applications to working with contractors to build homeless shelters, Johnson was always involved in a variety of projects. "When you work for a non-profit you wear many hats," Johnson said. But when she wanted to become a project manager, her CEO suggested she enroll in UC Davis Continuing and Professional Education’s Project Management Certificate Program.

As a working professional and mother, Johnson found that the program’s online courses suited her busy schedule. "The online format was great," she said. "And I made connections with a few students who were going through at the same pace as me."

Though she had plenty of experience managing projects, Johnson wasn’t familiar with the field of project management or its technical vernacular and practices. Here, she found the instructors really helped. "The teachers were great. Tony Oliver [instructor for several Project Management Certificate Program courses] provided great feedback. He would allow students to resubmit assignments until they understood it and got it right."

Johnson described how the lessons she got out of the program courses applied to aspects of her job. "The wide variety of information I learned was so valuable and immediately applicable to my job, such as project procurement, resource leveling and budgeting," she said. "But Mastering Project Time and Cost Management was my favorite class because it was most relevant to what I do."

"I was able to use my certificate to earn a promotion and a pay raise. My title is now 'Project Manager,' and I've been given more responsibility."

— Jessica Johnson, Project Management Certificate Program graduate

"I would absolutely recommend the program," Johnson continued. "It’s thorough, well organized and the instructors are very responsive, which isn’t always the case with online courses. The lessons and skills I learned could be used on the job immediately."

But perhaps the most valuable thing she got out of completing the program was career advancement. "I was able to use my certificate to earn a promotion and a pay raise," Johnson said. "My title is now 'Project Manager,' and I’ve been given significantly more responsibility."

Hopefully she’s got space in her closet for a few more hats.
The importance of information security has never been more evident than in today’s data-driven economy. However, the economy’s ability to fill this need with trained information security professionals has fallen drastically short. Every year in the U.S., 40,000 jobs for information security analysts go unfilled, and employers are struggling to fill 200,000 other cybersecurity-related roles. In addition, nearly one-third of hiring organizations report that it takes six months or more to fill cyber openings (Forbes, 2017).

In response to the growing need for trained professionals in this ever-expanding field, UC Davis Continuing and Professional Education will launch the UC Davis Cybersecurity Boot Camp this summer. Tailored to the needs of working professionals and full-time students, the program takes place during evening and weekend sessions at our classroom facility in downtown Sacramento.

“The Cybersecurity Boot Camp has a rigorous, fast-paced curriculum, but graduates will leave with the hands-on skills and knowledge sought by employers,” explains Alex Lowrie, director of Technology and Information Management Programs at UC Davis Continuing and Professional Education. In addition to the program’s classroom instruction, students can expect to spend 20-30 hours a week on outside projects and assignments.

For professionals already working in IT and looking for exciting new opportunities, as well as those who might be interested in entering a new field, the career outlook is bright. According to the Bureau of Labor Statistics, cybersecurity jobs are projected to grow by 28% over the next 10 years. And cybersecurity professionals earn a robust salary, averaging $95,510 a year (2017).

What You’ll Learn in the Boot Camp

The 24-week program combines cybersecurity, networking, systems, programming and career skills to help position students for success after they graduate.

The curriculum includes:

• A deep foundation on the core technical skills required to work in this field
• Instruction in LAN/WAN networking, common operating systems, cryptography, ethical hacking, programming and more
• Pre-course tutorials for students with little or no prior experience
• A blend of marketable hard skills, hands-on experience, behavioral interview prep and skills applicable to industry certifications

By the time students graduate, they will walk away with a number of new skills, including the ability to successfully design and configure digital networks using Cisco IOS; perform administrative and security tasks to Windows and Linux Operating Systems; understand cybersecurity threats, actors and methods; perform Python programming along with Bash and PowerShell scripting; and advise on cybersecurity best practices and risk management strategies.

CAREER PREPARATION BENEFITS

At the Cybersecurity Boot Camp, students will receive a wide range of career planning services, including:

• Career content and practice sessions
• Database of customizable tools and templates
• Online career events with industry professionals
• One-on-one career coaching

The UC Davis Cybersecurity Boot Camp begins on July 9 in Sacramento. To learn more about the program, visit our website.
